

VEGA DAILY

Vitamins to VEGA!

Vega, China Vitamins Manufacturer

6th. Nov. 2023

Vitamins

Vitamins: Recently, the inventories of clients have continued to be consumed and almost depleted, so demand has increased slightly. Calcium pantothenate, folic acid, niacin/nicotinamide, K3, etc. have reached out the bottom line; the prices of biotin, VC, B6, B12, and VE have declined a little bit; B1 has temporarily stabilized after previous round of price increases.

Amino Acids

The overall trend of amino acids this week is mainly weak. The factory quotation of 98% lysine has been slightly declined, and the market price is around USD 1360-1420/MT. The market price of lysine sulphate has dropped between USD770-810/KG; most clients are waiting and watching; Threonine: The factory's quotation is relatively strong, but the market transaction is quite weak, and end users are purchasing given the demand.

API

The veterinary API market still maintains a weak trend. The terminal demand is average. Users are purchasing for urgent needs, and trade channels are also more wait-and-see. Doxycycline, florfenicol, and telotimib still keep a slow downward trend, and the market competition is fierce; the prices of amoxicillin, albendazole, and colistin sulfate are firm, and oxytetracycline, Lincomycin, etc. remain stable, and the future market transactions need to be paid attention to.

Food Additives

The overall food additive market shows a stable trend. The prices of the sweetener series products, sucralose/aspartame/acesulfame potassium have been stable; the price of creatine monohydrate has increased due to the control of raw materials, and some mainstream manufacturers still stopped reporting. The market transaction price is around USD 8.2/kg; the price of L-carnitine series products has increased due to cost and demand; the price of preservative products sodium benzoate/potassium sorbate/citric acid series has stabilized due to market demand.
