Vitamins to VEGA!

9th. May. 2024

## VITAMIN

01

As of now, factories in the domestic market have stopped reporting VE 50% feed grade, and the transaction price in the domestic market has risen to \$8.85/kg, and it is expected to reach more than \$9.3 soon; factories in the Chinese export market have also stopped reporting, and some manufacturers have required the signing price for core customers to be no less than US\$9. The transaction price in the export market has gradually risen to US\$8.6-8.8. It is expected that the transaction price will exceed US\$9 in the near future, reaching between US\$9-9.5, and the factory quotation may be higher.

## AMINO ACID

02

Threonine: There are fewer inquiries in the market recently, and the quotations in the trade market are slightly declining. Under the weak terminal demand, the downstream demand for goods is sluggish, and the overall market transaction is not large.

## API

03

Amoxicillin is currently operating at a stable medium-to-high level, with a market price of \$31.4/KG. The market supply and demand are relatively stable and balanced, and subsequent prices are expected to remain stable.

## FOOD ADDITIVE

04

Recently, affected by market conditions, mainstream xylitol manufacturers have adjusted the price to around CNY 23-24/KG, and the transaction price in the foreign market is around USD2.8-3/KG. It is expected that the possibility of subsequent decline is very small, and we will continue to pay attention to the market conditions.
